CRSP/Compustat Merged - Fundamentals Annual

Changes to CCM

As of the February 2014 release, USEDFLAG is no longer used in the WRDS CCM web queries. Please select
LINKTYPES LC, LU, and LS for the same results. These represent the vast majority of the links between CRSP
securities and Compustat companies, without introducing duplicate data.

The WRDS-created linking dataset (ccmxpf_linktable) has been deprecated. It will continue to be created for a
transition period of 1 year. SAS programmers should use the Link History dataset (ccmxpf_lnkhist) from CRSP.

Please refer to the WRDS knowledgebase (https://wrds-
web.wharton.upenn.edu/wrds/support/Additional%20Support/WRDS%20Knowledge%20Base%20with%20FAQs.cfm?
article_id=6469&folder_id=671) and our new overview of CCM (https://wrds-
web.wharton.upenn.edu/wrds/support/Data/_001Manuals%20and%20Overviews/_002CRSP/ccm-overview.cfm) for more
information.

Step 1: What date range do you want to use?

Date Variable: [Data Date ⇕]

I would like data from start date: [1980-01-01-], to end date: [2014-12] **(yyyy-mm)**.

Step 2: How would you like to search this dataset?

What format are your company codes?

◉ GVKEY

◯ LPERMNO

○ LPERMCO

○ TIC

○ CUSIP

○ SIC

○ NAICS

○ CIK

Search the entire database

This method allows you to search the entire database of records.

You do not have to do anything, as you are searching for all company codes available in the entire database.

Please be aware that this method can take a very long time to run, because it is dependent upon the size of the database.

Retrieve saved codes from MyWRDS

Screening Variables (Select at least one per line)

The first 4 screening variables are pre-selected to produce one record per GVKEY-DATADATE pair, while keeping the vast majority of records. Screening on these variables will exclude records containing restated data, as well as pro forma and pre-FASB records, among others. Click on each variable for a more detailed explanation.
